EDUCATION

Vellore Institute of Technology

B.Tech - Computer Science Engineering (AIML) - CGPA - 8.1

Bhopal, Madhya Pradesh

Oct 2022 - May 2026

FIITJEE Junior College

Higher Secondary - Percentage - 89%

Hyderabad, Telangana

Aug 2021 - May 2022

FIITJEE World School

High School - CGPA - 10

Hyderabad, Telangana

Jun 2019 - May 2020

EXPERIENCE

India Space Lab (ISL)

Winter Technical Intern – Space Science & Technology

India

Dec 2024 – Jan 2025

- Completed hands-on technical training in space science and aerospace systems, gaining practical exposure to mission planning, payload design, and space-grade constraints.
- Analyzed small satellite and UAV system architectures through applied CanSat, CubeSat, and advanced drone modules, strengthening understanding of aerospace workflows and mission-level design trade-offs.

PROJECTS

TarangAI (LINK)

- Built a deep-learning-based Indian classical dance classification model by combining MediaPipe pose extraction with feature engineering and multi-output neural networks, achieving 89% classification accuracy across multiple dance styles.
- Developed a Pose Refinement GAN to correct user dance poses in real time using pose-skeleton inputs, enhancing recognition quality by 25% and improving feedback accuracy on posture, mudras, and facial expressions.

DocuMind AI (LINK)

- Engineered a RAG pipeline by integrating FAISS-based vector search with Gemini LLM, enabling context-aware question answering and improving response relevance by 30–40% compared to standalone LLM prompting.
- Implemented embedding-based similarity search and prompt optimization to reduce hallucinated responses by 35% and decrease average response latency by 20%.

Crop Yield Prediction using ANN (LINK)

- Engineered an ANN-based crop yield forecasting system by integrating multi-factor environmental and agricultural data, improving prediction accuracy by 10–15% compared to traditional ML models.
- Orchestrated a complete ML training pipeline using Python, TensorFlow, and Scikit-learn, optimizing data preprocessing and hyperparameters to reduce model training time by 20% and compute cost by 10%.

SentimentR (LINK)

- Developed a sentiment analysis system using TF-IDF features and ML models such as Logistic Regression and SVM, achieving 91% accuracy on text classification tasks.
- Tailored the prediction model using Logistic Regression, Naive Bayes, and Random Forests, boosting F1-score by 10% after optimizing feature extraction and hyperparameters.

TECHNICAL SKILLS

Languages: Python, C++, Java

Tools: Git, GitHub, MySQL, Jupyter Notebook, Power BI

Libraries: tensorflow, pytorch, nltk, scikit-learn, pandas, numpy, matplotlib, mediapipe, pyqt5, catboost

Core Concepts: Machine Learning, Neural Networks, NLP, Computer Vision, Prompt Engineering, GenAI, OOP

Spoken Languages: English, Hindi, Telugu, Marathi
